

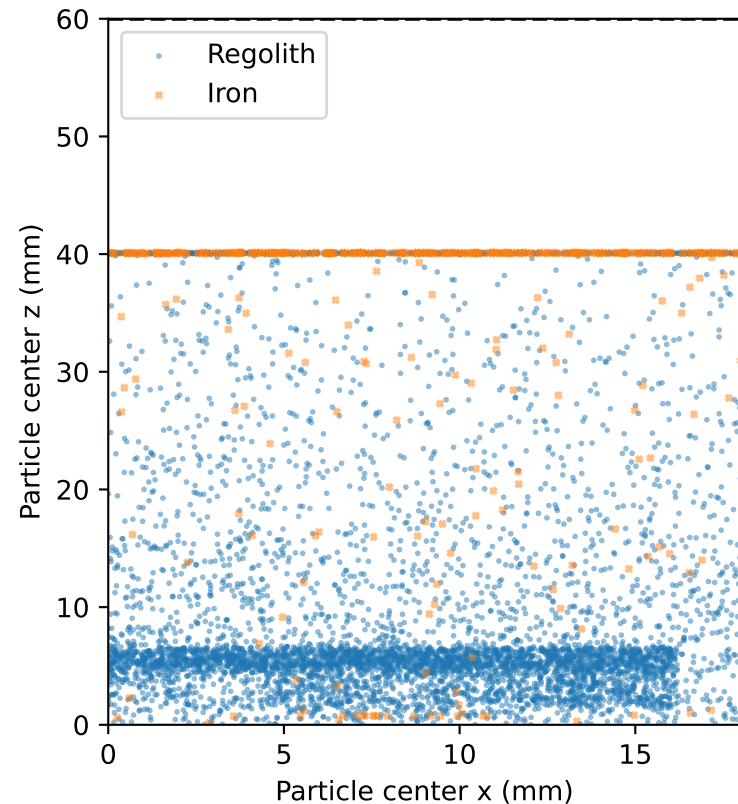

FIG. 3 — Good-variable DEM checkpoint
Historical filename: real drag, 1.5 mm iron, gas input 3.5 m/s

Step 2000; N=6500

Regolith mean z: 11.56094 mm

Iron mean z: 34.46890 mm

Centers inside bounds: 100.0%

Whole spheres inside: 97.40%

Bounds: 18 × 18 × 60 mm

60 mm lid is from source code;
checkpoint has no lid metadata.

Historical 3.58x mean-z ratio uses
a separate, unmatched no-iron run.
It is not a calibrated mixing gain.
